## DIGITAL PRIVATE MOBILE RADIO

(dPMR) (aka dPMR446)

dPMR or digital private mobile radio, is a Common Air Interface (CAI) for digital mobile communications. dPMR is an open, non-proprietary standard that was developed by the European Telecommunications Standards Institute (ETSI) and published under the reference ETSI TS 102 658, with a simplified version of the dPMR protocol intended for license-free applications published by ETSI under the reference TS 102 490.

dPMR uses a 4800 bps FDMA vocoder and efficient 6.25 kHz channels with nil co-channel interference.

**Krypto1000** and its Control Center allow for full prosecution of data, control and the vocoder carried in digital voice channels of numerous DMR systems and more importantly, in variants of their standards.

For the dPMR (dPMR446) standard, all of the following manufacturers and variants are supported:
