COMINT-SIGINT SYSTEM

for Unmanned and Autonomous Vehicles
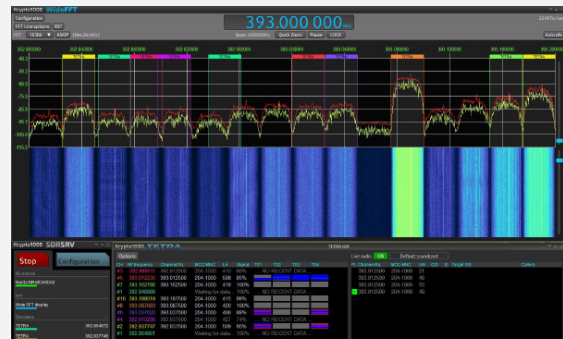

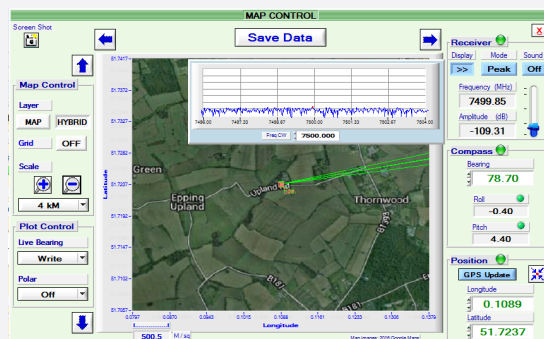

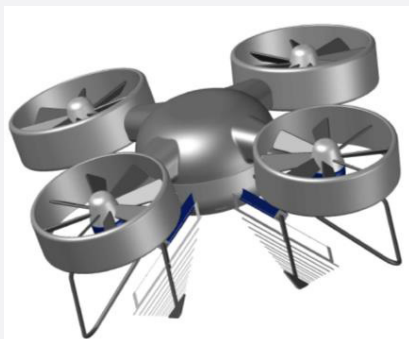

Features

- Best in class receivers
- SIGINT/COMINT capability
- Wideband or multichannel
- Complete, current decoders
- Integrates into **any** platform
- Customizable
- Precision classification
- Radio fingerprinting
- EA / Active SIGINT optional
- Automatic network diagramming

State-of-the-Art COMINT capabilities
Best in class receivers and the leading SIGINT software can be adapted to and integrated into virtually ANY platform with suitable payload capacity - far smaller than you think!

Wideband or Multichannel SIGINT
Compatible with 350+ receivers and other SIGINT hardware, Krypto500 and Krypto1000 can be integrated onto your unmanned platform to collect large portions of spectrum for maximum intelligence production.

Complete Collection, Classification, Analysis, Decoding, Fingerprinting
The market's leading SIGINT software for EA and ES applications with more decoders, classifiers and fingerprinting tools for the best-possible COMINT results.

Integration Expertise – Decades of expertise integrating SIGINT systems on the most challenging and small, tactical and clandestine platforms and applications.
